

Ravenstack x Gemini Spark Sovereign Master Blueprint & Ideation Report

****Date****: August 21, 2026

****Operator****: Jason Boyd (Master Boydimus / Ravenlord)

****Location****: Indiana, United States

****Infrastructure****: Hetzner Dedicated VPS (`ReClaw-2.0` / `OpenClaw` / `FastMCP :8100`) + Local Gatehouse Node (`ThinkCentre` / `Ollama`) + Google Workspace / Gemini Spark / NotebookLM

1. System Architecture & The 3-Tier Cognitive Engine

The operational activation of the ****ReClaw Platform Connector MCP**** (Tailscale Funnel proxying port `:8100` on the Hetzner VPS) establishes a direct bidirectional bridge between ****Google Workspace / Gemini Spark / NotebookLM**** and the sovereign ****Ravenstack Keep**** ecosystem (OpenClaw Gateway `:18789`, ReClaw API `:8000`, Ollama `:11434`, and the git-backed Obsidian Vault).

...

...

2. The Knowledge Distiller Architecture Explained

Why Raw Document Vector Ingestion Fails

Dumping raw multi-hundred-page PDFs directly into vector embeddings destroys RAG

performance:

1. **Context Dilution**: 90% of technical manuals consist of formatting boilerplate, introductions, and generic prose.
2. **Retrieval Collisions**: Similar generic headers match unrelated semantic queries.
3. **Execution Gaps**: Raw PDFs rarely present step-by-step determinism or clear safety thresholds.

The 4-Tier Filtering & Ingestion Law

- **Tier 1 (High-Value Technical Assets)**: Deep distillation into atomic notes (<200 words per section).
- **Tier 2 (Commodity AI Fluff / Tutorials)**: Automatic skip (already in foundation model weights).
- **Tier 3 (Strictly Quarantined PII & Financials)**: Absolute quarantine; never ingested to public RAG.
- **Tier 4 (Segregated Venture Repositories)**: Isolated into standalone domain vaults (e.g., Airbnb cabin builds, game development).

The Quality Gate Rubric (\$Q_c\$)

Candidate notes are scored at temperature 0 across 5 dimensions:

$$\$Q_c = 0.25 S_{\text{den}} + 0.20 S_{\text{prov}} + 0.30 S_{\text{exec}} + 0.15 S_{\text{safe}} + 0.10 S_{\text{atom}}\$$$

- S_{den} (Density Ratio): Actionable technical tokens / total tokens.
- S_{prov} (Provenance): SHA-256 hash, title, edition, page anchor.
- S_{exec} (Executability): Deterministic step-by-step recipes.
- S_{safe} (Safety Completeness): Circuit breaker—must equal 1.0 for electrical/thermal procedures.
- S_{atom} (Atomicity): Self-contained with bidirectional `[[Wikilinks]]`.
- **Threshold**: $Q_c \geq 0.85$ allows automatic ingestion into Obsidian and hybrid indexing (sqlite-vec + BM25 FTS5).

3. The 7 Sovereign Innovation Matrices

Matrix 1: Five Fresh Sovereign Skills

1. **skill:notebook-vault-distiller**: Automated workflow querying NotebookLM chunks across specialized corpora, distilling them via the 5-point rubric, and writing atomic notes directly to ``Ravenstack/knowledge/``.
2. **skill:lean-ci-sop-forge**: Translates messy shop-floor voice notes or troubleshooting transcripts into MasterBrand-standard 5-Why root cause analyses and Standard Operating Procedures.
3. **skill:sboa-audit-sentinel**: Compares municipal disbursement records and county budget orders against Indiana SBOA compliance rules, generating dual-receipt verification reports.

4. **skill:audio-suno-prompt-architect**: Ingests lyric drafts and genre references, compiling structured Suno AI prompts using the HHVCTA framework with exact arrangement brackets ([Drop], [Breakbeat], [Outro]).
5. **skill:physical-scrap-builder**: Analyzes photos/inventories of salvaged electronics and scrap metal, querying distilled conversion schematics to generate step-by-step DIY fabrication plans.

Matrix 2: Five FastMCP Tools & Bridge Connectors

1. **notebooklm_bulk_ingest**: Non-blocking async FastMCP tool allowing OpenClaw agents to push distilled files or URLs directly into designated Google Notebooks.
2. **gatehouse_pipe_chime**: Local ThinkCentre bridge endpoint (:8765) executing Piper neural TTS acoustic notifications for agent task completions.
3. **sqlite_vec_memory_query**: Fast hybrid search endpoint bridging Hetzner `sqlite-vec` semantic memory directly into Gemini Spark tool turns.
4. **alesis_midi_groove_parse**: Analyzes uploaded `.mid` drum tracks, extracting tempo stability, velocity dynamics, and syncopation grids.
5. **thermal_sensor_logger**: Polls DIY geothermal/pond-cooling loop telemetry and logs time-series data to SQLite with automatic overheat warnings.

Matrix 3: Five Autonomous Workflows & Pipelines

1. **Scribe Mill Inbox Triager**: Windows Gatehouse cron monitors `C:\Users\Jason\Raven\INBOX`, runs local `phi4-mini` classification, and routes files to Obsidian staging or NotebookLM.
2. **Weekly Raziel Reflection & AST Healer**: Monday 06:15 UTC pipeline where local `gemma4` audits vault wikilinks, detects dialectical contradictions, and stages PR diffs in `/ops/staging/`.
3. **Zero-Token County Anomaly Scanner**: Background pipeline executing statistical Benford's Law and outlier checks over regional public datasets with zero cloud token cost.
4. **Google Keep to Obsidian Courier**: Nightly sync extracting mobile quick notes from Google Keep, structuring YAML metadata, and depositing into `Ravenstack/\_templates/capture.md`.
5. **Docker Health Watcher & Safe Self-Healing**: Automated daemon monitoring Hetzner container states with automated non-destructive restarts and incident card logging.

Matrix 4: Five Raziel & Agent Fleet Upgrades

1. **Dialectical Council (Advocate vs Security Warden)**: Multi-agent debate mechanism where Raziel pits proposal generation against a strict security auditor before executing mutations.
2. **Spatial Keep Coordinate Tracking**: Real-time synchronization of agent activity states with the 16-bit Phaser 3 castle dashboard (`castle\_map.json`).
3. **Dynamic Memory Compaction**: Automatic rolling summarization of conversational session memory into persistent SQLite vector graph nodes.
4. **AST Codebase Auto-Patcher (Clawforge Engine)**: Automatic syntax tree parsing and targeted git patch creation for failing Python microservices.
5. **Scrying Warden Threat Radar**: Continuous passive monitor scanning inbound webhooks

and gateway logs for unauthorized probing or auth drift.

Matrix 5: Five Bots, Edge UIs & Physical Alerts

1. ****Ravenkeep Discord Slash Command Bot****: Direct gateway bot allowing remote status checks, agent commanding, and queue approvals via Discord.
2. ****Gatehouse Headless Toast Dispatcher****: Native Windows notification daemon alerting Jason to long-running pipeline completions or human gate triggers.
3. ****Acoustic Audio Chime Announcer****: Piper TTS synthesizer playing custom audio cues on local studio monitors based on agent state changes.
4. ****Flipper Zero BadUSB Admin Key****: Hardware USB payload script allowing rapid physical emergency diagnostics and Tailscale mesh pairing.
5. ****Mobile Quick-Approve PWA****: Lightweight web UI connecting via Tailscale Funnel for one-tap human gating of county packages and pull requests.

Matrix 6: Five Creative Audio & Hardware Inventions

1. ****Alesis Drum MIDI to Suno Arranger****: Converts live electronic drum performances into structured tempo maps and arrangement guides for Suno AI generations.
2. ****Suno Prompt Vault & Stem Catalog****: Obsidian-backed catalog tracking audio seeds, genre tags, stem files, and Suno AI generation parameters.
3. ****Pond-Cooling Geothermal HVAC Telemetry****: Arduino/ESP32 sensor array monitoring water loop temperatures and calculating real-time COP (Coefficient of Performance).
4. ****Scrap Motor Bench Dynamometer****: Custom hardware rig measuring torque and RPM on salvaged DC and brushless motors for DIY machinery.
5. ****Pixel Art Sprite Sheet Auto-Slicer****: Python CLI script utilizing Aseprite to automatically slice, format, and generate Phaser 3 JSON atlas files for retro game engines.

Matrix 7: Five High-Impact Content Remixes

1. ****The Lean Manufacturing CI Lens****: High-efficiency breakdown applying 5 Whys and Kaizen waste elimination to modern AI engineering workflows.
2. ****The Sovereign Zero-Token Protocol****: Deep-dive content series contrasting expensive cloud API traps with sovereign local-first architectures.
3. ****The Indiana Hardware Grit Perspective****: Shop-floor realities and hands-on fabrication tools tearing down Silicon Valley venture hype.
4. ****The Forensic Audit & Benford's Breakdown****: Investigative data journalism dissecting public budgets through mathematical anomaly detection.
5. ****The Cyber-Arcane Fortress Metaphor****: Engaging 16-bit visual and narrative documentation bringing server administration and agent operations to life.
